Team Name:

Bin There, Done That

Project Name:

Smart parcel sorting system

SMART PARCEL SORTING SYSTEM

Date: May 22, 2025

LOGBOOK WEEK 4

1. Goal Past Week

- Receive hardware from the tool room and start testing each component making sure it will work properly.
- Draft state machine for all STM32, ESP32, Raspberry Pi 4.

2. Achievement

- Got the 12V Adapter from the tool room and test run successfully the conveyor.
- Finished drafting the state machine for the whole system

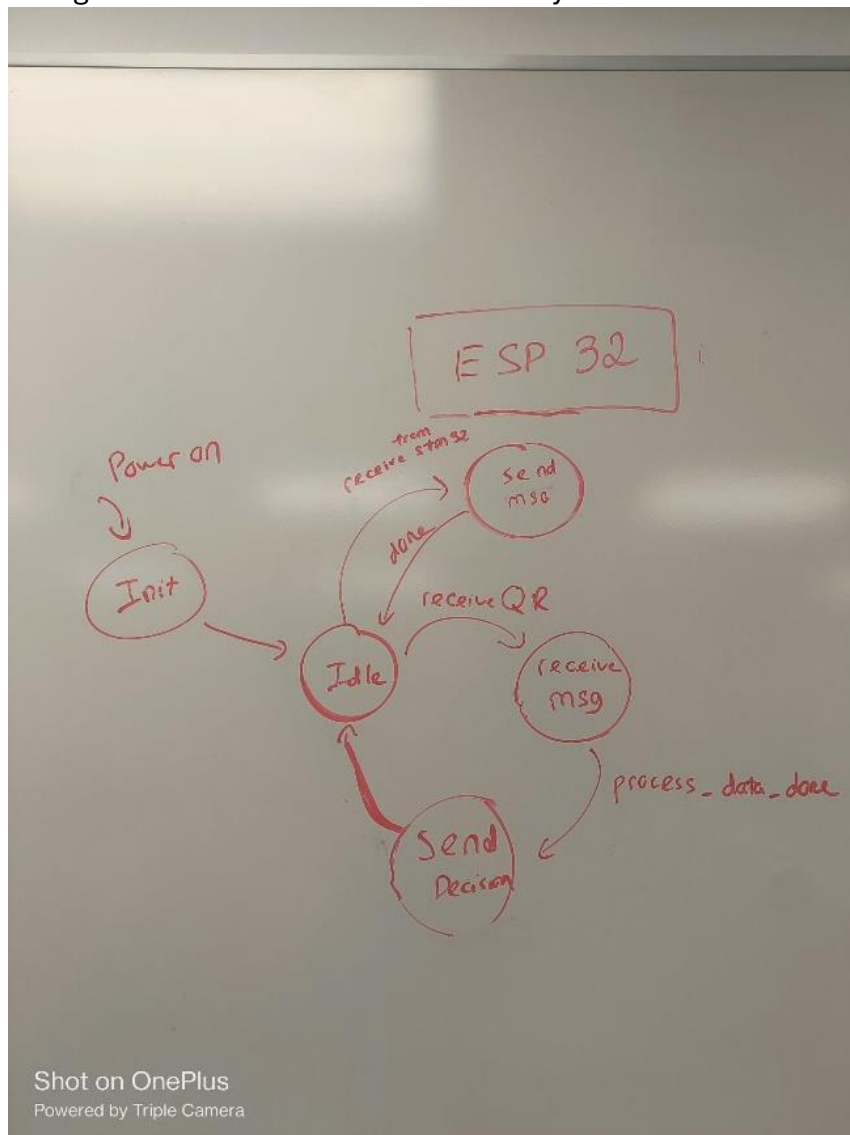

Figure 1: State machine for ESP32

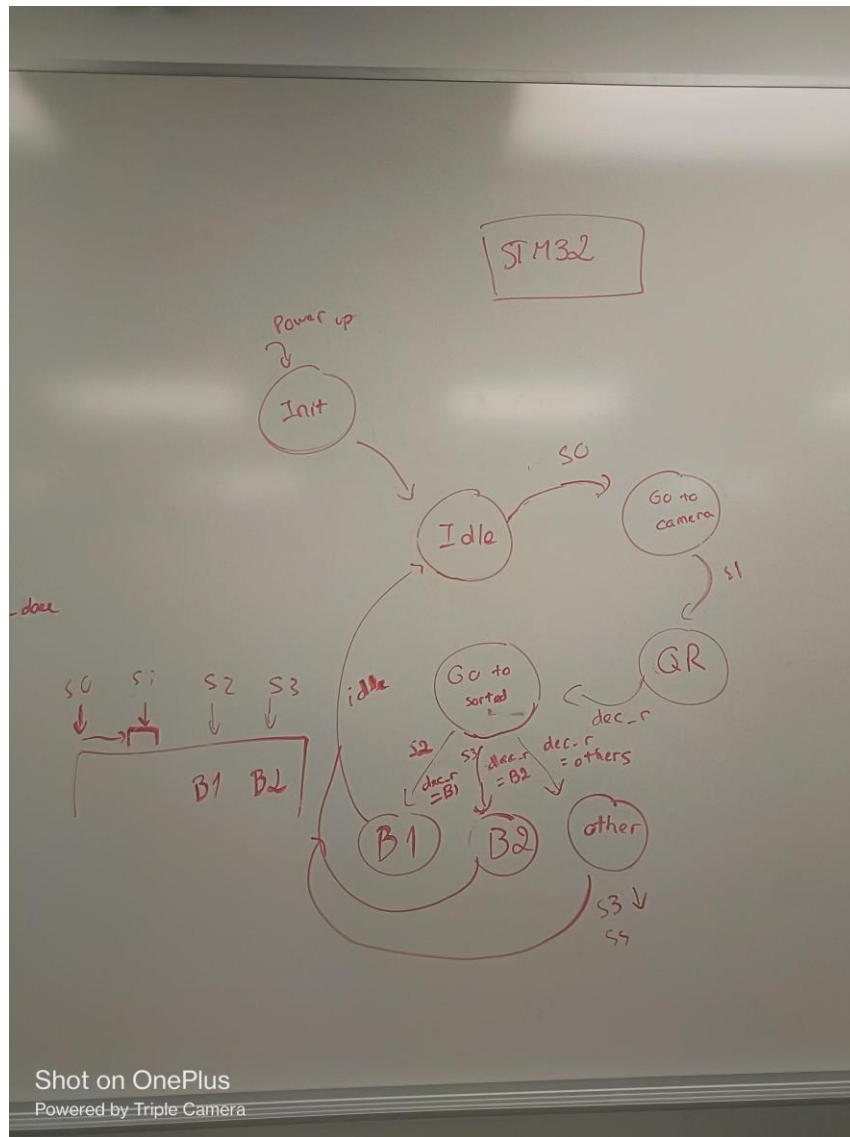

Figure 2: State machine for STM32

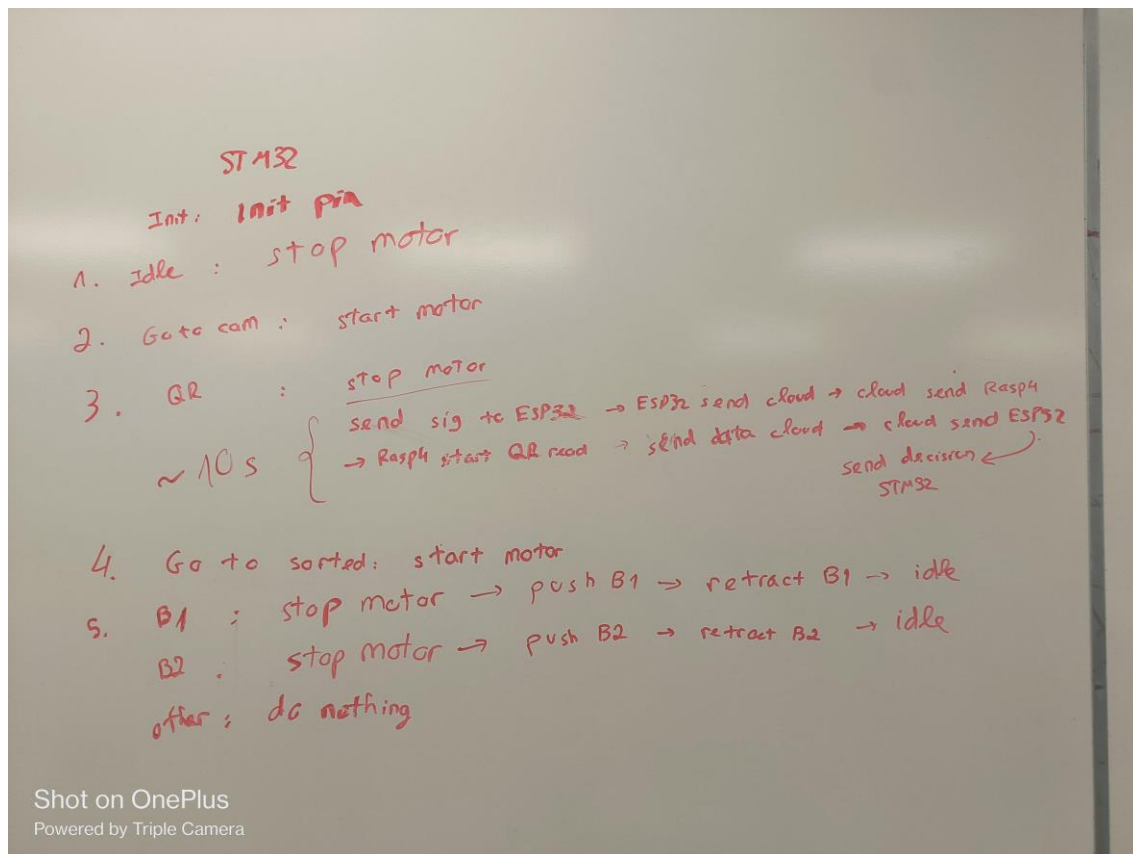

Figure 3: STM32 State's functionality

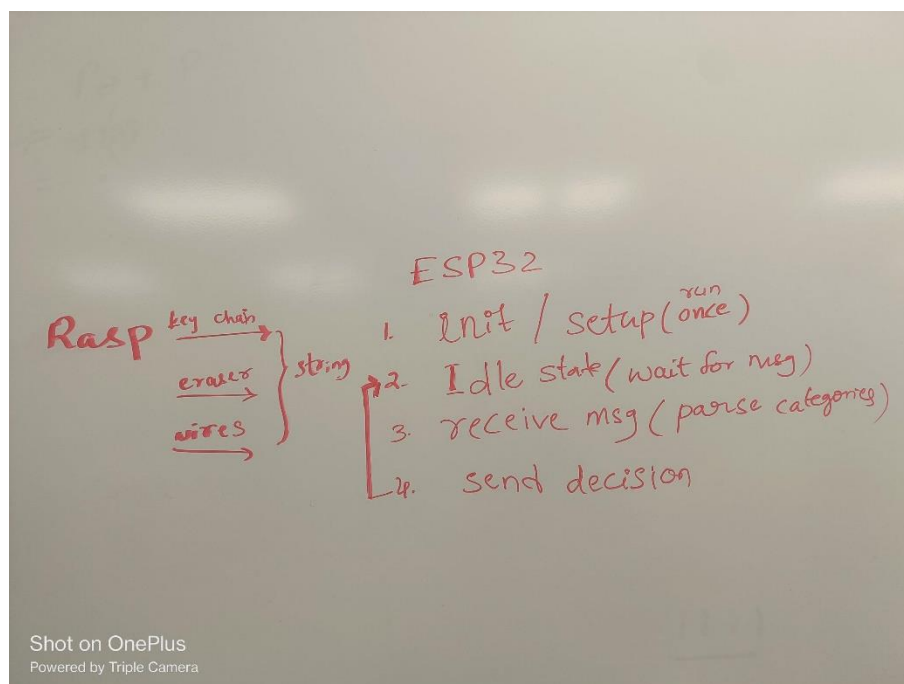

Figure 4: ESP32 State's functionality

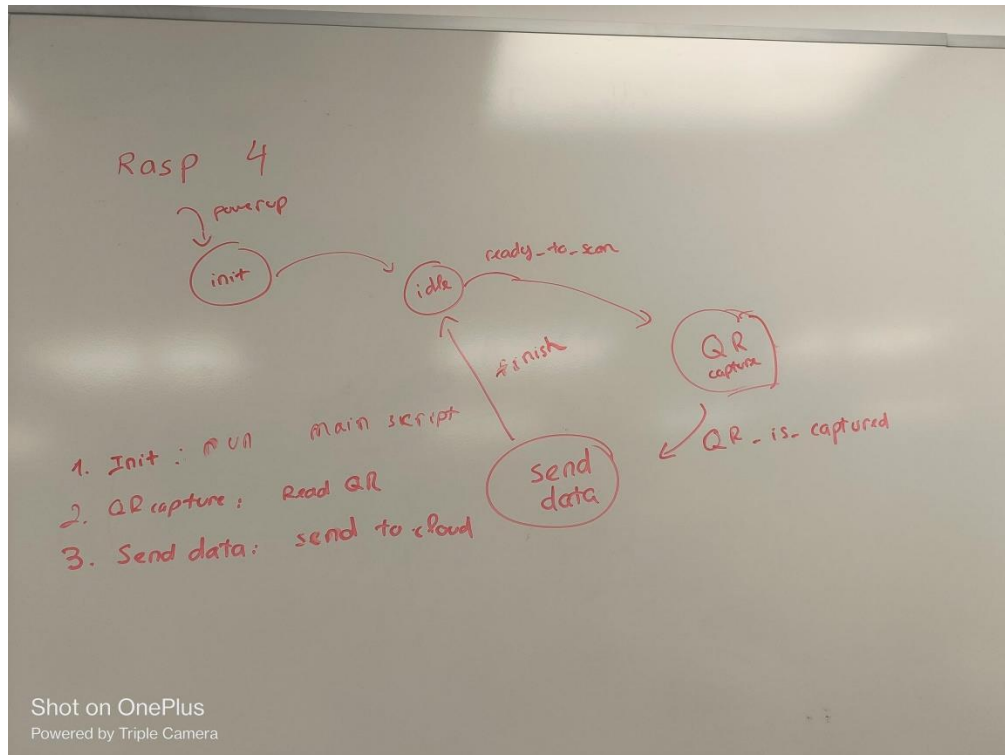

Figure 5: State machine for Raspberry 4

2.1. Problems occur:

ESP32 not connecting to wifi issue.

2.2. Resolve:

- Issue: [ESP32 cannot connect to 5GHz band](#)
- Solution: Edited the network band to 2.4GHz because ESP32 does not support 5GHz band

Edit network info

Changing the network name or password will disconnect all connected devices.

Change the network name and password that other people use for your shared connection.

Network name

ESDG1

Network password (at least 8 characters)

12345678

5 GHz

Any available

2.4 GHz

Save Cancel

3. Goal for Week 5

- Receive all hardware and start testing + assembling all components
- Write code to STM32 to control the conveyor and actuator (if time permit)
